---

Muhammad, wanted to specify the idea for the new Treasure Hunt Dapp:

1) Each gate image on the Treasure Map should link to the Dapp and open with a large image of the same Gate picture in the Dapp.

2) The Dapp should link to the NFT or NFTs the user owns. Those NFTs act like a key to open the treasure chest.

3) I will send you a video showing the treasure chest opening for people who get a prize.

4) Prizes:

- Major prize will be the Eth jackpot. That is the Buy Price. We dont directly send money. We buy their NFT at the buy price off opensea. There will be just 12 of these so doing it manually. Only one per Gate so 12 total.

- Free NFT: There are 8 1:1 NFT to give away. So we will give away those randomly. Those will be airdropped.

- Ticket to Comic Book: Everyone will win a ticket to the First Edition Comic Book NFT. The ticket will be burned to mint the Comic Book. The Comic Book is not done yet so it will mint in the future. The ticket will be a limited edition cover for the Comic Book (5 different special covers). These will also be airdropped.

5) Selection Method:

- Only 1 Eth prize will be given away at each Gate. Awarded randomly.

- The 8 1:1 Ogdoad NFT will be given away randomly but with more weight on the last Gates.

- One Comic Book will be given to everyone not getting one of the above. However, only one Comic Book per NFT key. If they own 5 NFT the can get 5 comic book tickets.

6) Key Selection – It would be great to let people try their individual keys one at a time, like they were unlocking a chest. I could get you a video or gif of a key unlocking a lock so to give users a nice experience and not just a quick text prompt.

7) Failure: Should show a failed attempt with a gif or video of a rattling chest that does not open.

8) Information Read Out:

- Should specify the gate, ex. "Gate 1" (picture will also show Gate 1)

- Should specify Gate Threshold (1000 NFT Sold).

- If the Gate is open or closed. Gates open when the Threshold is met. Example (“Gate is Open” or “Gate is Closed”)

- Warning if a key cannot open a Gate. A key can only open a Gate if it was purchased before the Gate opens. Example “Your key cannot open this Gate”. Every key can be used on every gate if the key was bought before the Gate opens.

- Double Buy Price: It should say if the key is eligible for a double buy price. This happens if the key is bought before the timer expires on each Gate. Example: “Key eligible for Double Buy Price!”

Please give me a quote for a Dapp that does the above, or let me know if you have any questions.

– Brandon Blake
